Technical Report

Problems page:

On the problems page, I used [CSS](#) and [HTML](#) to build and design a simple, and develop a website specially created to help with health problems and to promote wellness in the smoothest way possible to make the process easier for all users,

I created a chat bot with [BACK END](#) and [CSS](#), [FRONT END](#), featuring exclusive [LAMA](#) access.

my main goal was to make the website helpful and easy to use for anyone looking for

Login Page:

Function: Allows users to securely sign in and access personalized data.

Feature Details:

Built using React.js for a modern, responsive interface.

Stores user information safely for future visits.

Includes “Remember Me” and “Forgot Password” options.

Ensures secure authentication and smooth user experience.

Donation Page:

Function: Enables users to make secure online donations directly through the website.

Feature Details:

Integrated with Paymob API for safe and fast payments in Egyptian Pounds (EGP).

Provides preset amounts (50, 100, 200 EGP) and custom donation options.

Designed with React.js for a clean and user-friendly interface.

Helps support hospitals and organizations in need through an easy donation process.

AI Chat Bot

Function: Provides intelligent and interactive assistance to users through a chatbot.

Feature Details:

Built using AI-based logic to respond to user questions.

Helps users navigate the website and find relevant information easily.

Designed to make the platform more engaging and user-friendly.

Enhances accessibility and communication across different pages.

Health Tips Feature

Function: Educates users about diseases, prevention methods, and healthy living.

Feature Details:

Offers clear explanations about common diseases and their treatments.

Provides daily health advice and information about the benefits of vitamins.

Encourages healthy habits and lifestyle improvement.

Designed to raise awareness and promote overall well-being.

Milestone Feature

Function: Motivates users through daily health-related tasks and progress tracking.

Feature Details:

Users complete daily missions related to fitness, nutrition, or awareness.

Each completed task increases the user's level and progress.

Designed to make health education more interactive and rewarding.

Encourages consistency and self-improvement through gamification

Home Page Feature

Function: Introduces users to the platform and provides easy navigation to all sections.

Feature Details:

Welcomes users with a clean and simple interface.

Explains the purpose and goals of the website clearly.

Includes quick links to major sections like Login, Donation, and Health Tips.

Designed to give a professional and user-friendly first impression.

Navigation Feature

Function: Helps users move smoothly between different pages and features within the website.

Feature Details:

Built using React Router to provide fast and seamless page transitions.

Includes clear navigation bars and links for easy access to all sections (Home, Login, Donation, AI Chat, etc.).

Designed for both desktop and mobile users with responsive routing.

Enhances user experience by reducing loading times and improving flow.

Weak Points:

Currently limited to basic routes without advanced error handling.

No breadcrumb or history tracking system implemented yet.

Future updates could include smarter navigation and user progress saving.

Website Overview

Brings together all core features into one complete and interactive health and donation platform.

Combines technology, health education, and social impact.

Each page plays a specific role — from awareness and guidance to real-world contribution.

Designed and developed collaboratively by a five-member team.

Aims to make technology a tool for improving community health and supporting those in need.
